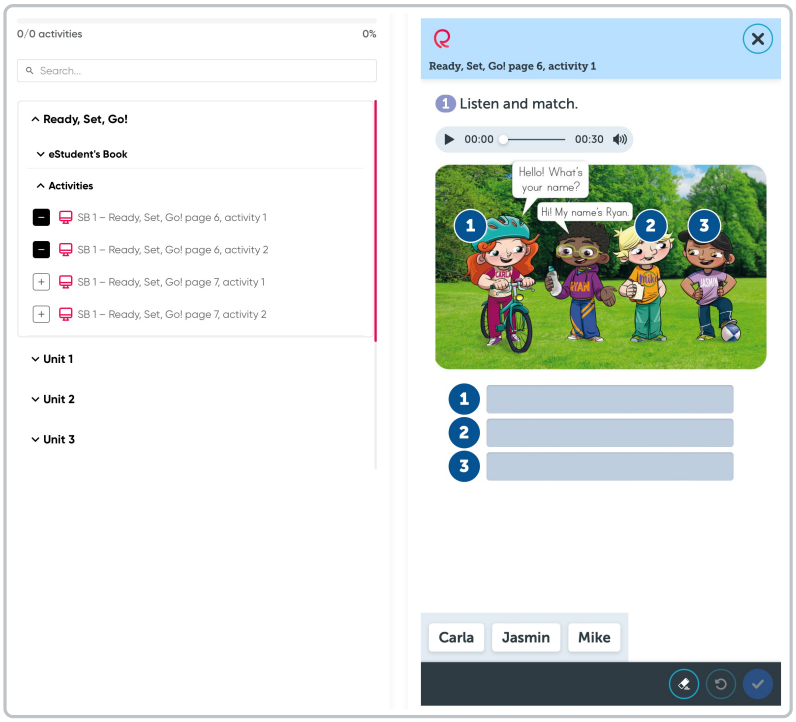
Also known as **tokens or product access codes**, this section allows you to manage the educational products available within Studio, as well as unlock new content using codes.

How to view products?

In this section, the products available to the user are displayed.

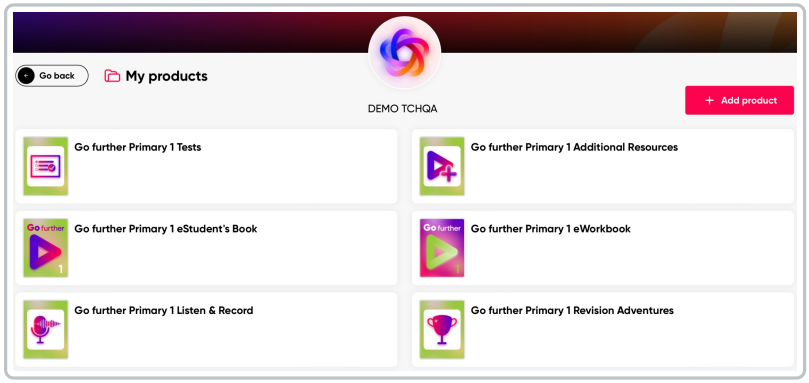
To explore a product:

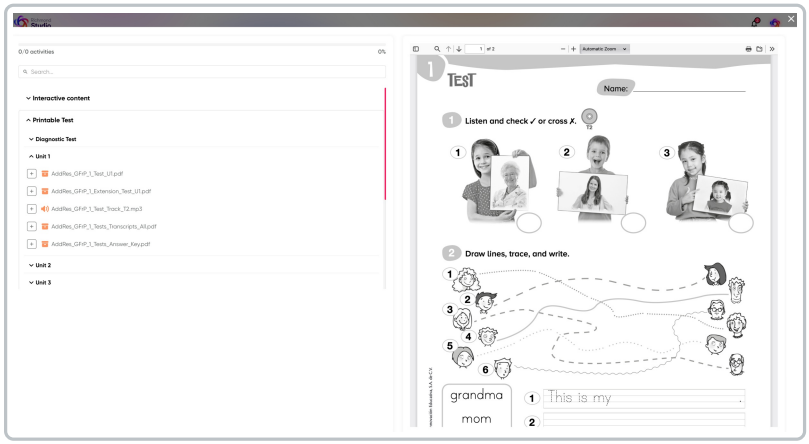
1. Select the product you want to review.
2. Its associated content and materials will be displayed.



To see all available products:

- Click <View all> to access the complete list.

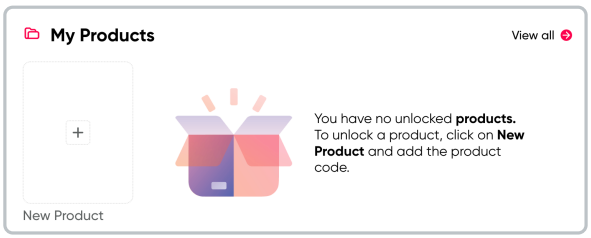


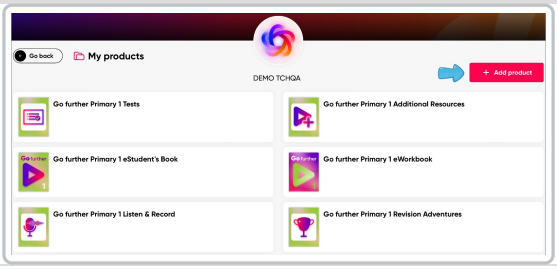


How to add new products?

There are two ways to add products:

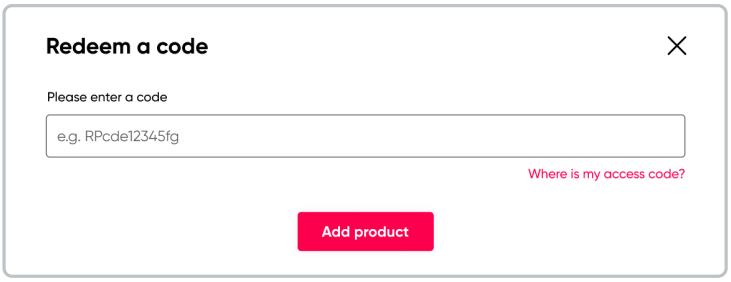
- From the Dashboard: **New product**
- From the general view: **+ Add product**

New product	+ Add product
	




Steps to add a product:

1. Click **+ Add product** or **New product**.
2. Enter the corresponding access code.
3. Click **Add Product** to confirm.



What is an access code?

A product access code is a unique combination of letters and numbers that allows users to unlock content within Studio.

Features:

- It is alphanumeric
- It can have between **12 and 20 characters**
- Examples:
  - `RP4E5F678923`
  - `XX00-0X0X-00XX-0XX0`

Where can you find it?

- Inside the cover of a physical book.
- On a card or material included with the product.
- Provided by the institution.
- In an email or digital purchase (e-commerce).

Important: This code is required to register and enable products within the platform.

Where can I find my products?

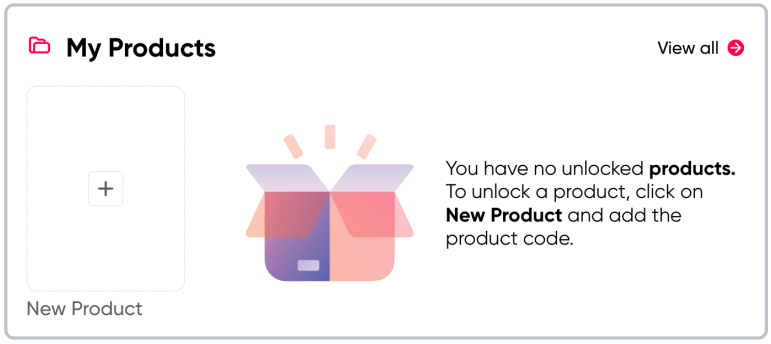
Once successfully added:

- The product will appear in the **My Classes > Class Materials** section.
- The content will be available for use in activities and assignments.

No products state

If no products have been unlocked:

- An informational message will be displayed indicating that no content is available.
- The user will be prompted to add a product using an access code.



Why is it great?

- Centralizes the management of educational materials.
- Facilitates access to digital content.
- Enables quick activation through codes.
- Integrates products directly into the class environment.

Keep in mind:

- Codes must be valid and not previously used.
- Activation directly impacts the available content.
- Immediate validation of the code upon entry is recommended.
