Clearing cache and cookies helps your browser run better by improving performance, fixing errors, and protecting your information.

What's the difference between Cache and Cookies?

- **Cache:** deletes temporary files that may be outdated and cause errors when loading pages.
- **Cookies:** removes saved data (sessions and preferences) to protect your privacy and fix login issues.

How to clear cache and cookies in Google Chrome?

1. Open Google Chrome.
2. Click the three vertical dots (top right).
3. Select **<Settings>**.
4. In the side menu, go to **<Privacy and security>**.
5. Click **<Clear browsing data>**.
6. Choose a time range (e.g.: Last hour, Last 7 days, All time).
7. Check the boxes:
 - **Browsing history** – Clears history across all synced devices.
 - **Cookies and other site data** – You'll be signed out of most sites. You'll stay signed in to your Google Account so your synced data can be cleared.
 - **Cached images and files** – Frees up space on your device. Some sites may load more slowly the next

time you visit.

8. Click <Clear data>.

Your browser does not support HTML5 video.

In this section, you will also find **Advanced options**, where you can delete, in addition to what is included in the **Basic options**:

- Passwords and other sign-in data
 - Autofill form data
 - Site settings
 - Hosted app data
-
